

# Secure Web Gateway

## Ensures safe and productive web use

Our Secure Web Gateway prevents malware infections and gives you control over your employees' web use. Spyware and viruses are stopped before they can enter the network. And, you can quickly create policies that set where and how employees spend time online.

### Highlights

- ▶ Prevent infection with dual, independent antivirus engines
- ▶ Enforce time-based web browsing policies
- ▶ Monitor web activity by users or department
- ▶ Maintain privacy with anonymity in reports
- ▶ Email scheduled reports directly to managers
- ▶ Hardware, virtualized, software or cloud-based appliance

### Proven protection against web threats

We block the latest web threats using advanced techniques like javascript emulation to detect malicious web code before it reaches the browser. It also prevents infected systems from calling home with sensitive data. Our engine inspects all HTTP, HTTPS, FTP, SMTP and POP3 traffic, including active content like Active X, Flash, cookies, VBScript, Java and JavaScript.

### Customizable URL Filtering boosts productivity

Our continuously updated database contains over 35 million sites in 96 categories. This lets you create safe web browsing policies, minimizing legal concerns around inappropriate content and maximize productivity. Set up policy by user or group using a variety of authentication options including IP Address, Active Directory SSO, eDirectory SSO and LDAP.

### Control apps - block Facebook, accelerate Salesforce

You get complete control to block, allow, shape and prioritize web applications with Deep Layer-7 inspection (Next-Generation Firewall). It identifies over 900 applications, and you'll get feedback on unclassified applications too.

### Dynamic reports provide unrivalled insight

You get detailed reports as standard, stored locally with no separate tools required. Predefined and customizable reports show key web activity like domains visited and bandwidth consumed. At-a-glance flow graphs show usage trends by IP address or user name. And report anonymization hides user names, requiring the four-eyes-principle to unhide them.

*"With Sophos Web Protection our employee casual surfing and time wasting dropped by about 75%."*

Michael Mierwinski, CIO, Mid-America Overseas

## HTTPS scans stop hidden threats

Our HTTPS Scanner covers a common blind spot – encrypted web traffic. It uses transparent de-encryption and re-encryption via a trusted man-in-the-middle technique to block malicious content. It also blocks programs tunneling over HTTPS, like anonymizing proxies. It also automatically validates certificates, taking the decision about which sites to trust away from users.

## Technical specifications

### Choose a hardware, virtual or software UTM

UTM hardware options support between 10 and 4000 users from a single appliance. Software appliances run on Intel-compatible PCs and servers. Virtual appliances are certified as VMware Ready and Citrix Ready and also run in Microsoft Hyper-V and KVM environments. For detailed technical specifications check our [website](#).

Appliance	UTM 110	UTM 120	UTM 220	UTM 320	UTM 425	UTM 525	UTM 625
Recommended users	10	40	140	330	1,100	2,300	3,800
Web proxy throughput	220 Mbps	220 Mbps	625 Mbps	1.25 Gbps	2 Gbps	1.8 Gbps	1.95 Gbps
Antivirus throughput	50 Mbps	75 Mbps	235 Mbps	375 Mbps	1.3 Gbps	1.7 Gbps	3.6 Gbps

## Required subscriptions

UTM Web Protection. This is also included if you subscribe to our BasicGuard or FullGuard UTM licenses.

## Extend your protection

- ▶ Add UTM Network Protection all the Next-Gen Firewall features you need
- ▶ Add UTM Endpoint Protection to Sync endpoint and gateway web policies
- ▶ Add UTM Wireless Protection to simplify and secure Wi-Fi
- ▶ Add UTM Web App Firewall to harden your web servers and web applications

## User Interface

Application control
